React • Next.js • TypeScript • Performance & Accessibility

PROFESSIONAL SUMMARY

Frontend Software Engineer with 8+ years of experience building scalable, high-performance, accessible e-commerce and checkout applications at enterprise scale. Expert in React and Next.js with deep proficiency in performance optimization, WCAG 2.1 accessibility, reusable component design, and end-to-end feature ownership. Proven track record delivering mission-critical user flows on high-traffic platforms, including checkout, membership, and transactional experiences for millions of daily users. Skilled at cross-functional collaboration with product, design, backend, and analytics teams to define API contracts, drive architectural decisions, and mentor engineers.

CORE COMPETENCIES & SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Java

Frameworks & Libraries: React, Next.js, Tanstack Virtual, Formik, SWR

Core Expertise: Performance Optimization, Accessibility (WCAG 2.1), Responsive Design, Design Systems, State Management, Component-Driven Development

Backend: Spring Boot (REST APIs), Spring Security, Spring Data / JPA, Microservices Architecture, Maven / Gradle

Testing: Jest, Vitest, React Testing Library, Cypress / Playwright (E2E)

Build & Dev Tools: Git, Vite, Turbopack, Storybook, GCP, GitHub Actions, Figma, Swagger, LogRocket, Adobe Analytics, ContentStack

AI & Productivity: GitHub Copilot (CLI, code reviews, a11y detection workflows)

PROFESSIONAL EXPERIENCE

Software Engineer (Frontend) | Costco Wholesale

Jan 2020 – Present

Frontend Engineer – Costco.com & Costco.ca | React, Next.js, TypeScript, GCP

- **End-to-End Feature Ownership:** Designed, built, and maintained high-traffic e-commerce features using Next.js and TypeScript for critical transactional user flows—membership verification, checkout-adjacent flows (address management, payment), and shopping lists—serving millions of daily users with strict SLA requirements.
- **Design System & Reusable Components:** Developed and owned reusable UI components within the Forge design system—product cards, address forms, pricing modules, toggle switches, and virtualized lists—adopted across multiple engineering teams, directly increasing developer velocity and code consistency.
- **Technical Design & Architecture:** Architected and led large-scale features end-to-end: created architecture diagrams, defined API contracts with backend teams, conducted gap analysis, and drove technical design reviews with stakeholders across product, UX, mobile, and security.
- **Frontend Architecture & Build Tooling:** Led Next.js 14→16 platform migration including Turbopack, Storybook, and Vitest upgrades, reducing CI/CD build times by 40% and improving test reliability across the entire frontend platform.
- **Performance & Accessibility:** Championed performance best practices through lazy loading, image optimization, and bundle tuning, directly improving Core Web Vitals on a high-volume retail platform; sustained Lighthouse accessibility scores of 97–100 ensuring WCAG 2.1 compliance.
- **Headless CMS & Content Architecture:** Designed and maintained ContentStack scaffolds, layouts, and content type configurations to power internationalized, multi-locale frontend experiences — enabling non-technical teams to manage content independently while maintaining frontend consistency and performance.
- **Testing & Code Quality:** Introduced scalable automated testing patterns using fixtures and shared mocks (Jest, Vitest, React Testing Library), reducing test duplication and improving maintainability; participated in code reviews to uphold high engineering standards.
- **Production Operations & Observability:** Deployed frontend applications to GCP in collaboration with DevOps/platform teams; monitored cloud infrastructure health and maintained zero-downtime releases across production environments within defined SLAs.

- **Monitoring & Incident Response:** Established and monitored LogRocket dashboards for real-user behavior tracking, session replay-based bug investigation, and error rate monitoring; leveraged Adobe Analytics to track feature adoption, funnel performance, and conversion metrics.
- **AI Tooling & Team Enablement:** Established GitHub Copilot team guidelines and workflows, improving code quality, review efficiency, and early detection of accessibility issues across the team.
- **Cross-functional Collaboration & Mentorship:** Partnered with UX, backend, mobile, analytics, security, and accessibility teams to deliver consistent cross-platform experiences; mentored junior engineers through design reviews, knowledge sharing, and pair programming.

Software Engineer | Tableau Software (Salesforce)

Jun 2019 – Dec 2019

- Designed and developed internal engineering tools to support the end-to-end test development lifecycle, improving team productivity and test reliability across frontend workflows.

Software Engineer | T-Mobile

Dec 2018 – Jun 2019

- Contributed to scalable B2B commerce applications by developing responsive frontend features using modern JavaScript frameworks and improving application reliability for enterprise users.

Programmer Analyst | Cognizant Technology Solutions

Aug 2011 – Aug 2013

- Built enterprise healthcare software for pharmacy benefit management, contributing to scalable client delivery for Express Scripts.

EDUCATION & CERTIFICATIONS

Certificate in JavaScript – University of Washington Professional & Continuing Education (Aug 2019)

Bachelor of Technology, Biotechnology – Anna University, India (2007–2011)

Oracle Certified Associate Java Programmer I • Microsoft Certified: Azure Fundamentals (2020)
